

1. Run the firefox with highest priority.
2. Run the firefox with lowest priority.
3. Change the running firefox process priority to 10
4. Write a multithreaded program in C. Both thread should perform the increment operation on a variable by 1.
5. Write a program and do the following :using sigaction API, handle SIGINT, SIGTERM, SIGQUIT, SIGSTOP,SIGTSTP and SIGKILL. Install dummy handlers for the mentioned signals Using sigaction() system call API !!!
6. Try to kill init process (with pid 1) from your command line(using kill command) or using kill() system call inside one of your processes.what is the result ? comment on the same.
